	NSPECTION SCHEDULE (CONTINUED)	
Item	Description	Outcome
5.15	Presence of RCD six-monthly test notice, where required (514.12.2)	Pass
5.16	Presence of diagrams, charts or schedules at or near equipment, where required (514.9.1)	Pass
5.17	Presence of alternative supply warning notice at or near equipment, where required (514.15)	N/A
5.18	Presence of next inspection recommendation label (514.12.1)	Pass
5.19	Presence of other required labelling (please specify) (Section 514)	N/A
5.20	Compatibility of protective devices, bases and other components; correct type and rating (no signs of unacceptable thermal damage, arcing or overheating) (411.3.2; 411.4; 411.5; 411.6; Sections 432, 433)	Pass
5.21	Single-pole switching or protective devices in line conductors only (132.14.1; 530.3.3)	Pass
5.22	Protection against mechanical damage where cables enter equipment (522.8.1; 522.8.5; 522.8.11)	Pass
5.23	Protection against electromagnetic effects where cables enter ferromagnetic enclosures (521.5.1)	Pass
6.0	DISTRIBUTION CIRCUITS	
6.1	Identification of conductors (514.3.1)	Pass
6.2	Cables correctly supported throughout their run (521.10.202; 522.8.5)	LIM
6.3	Condition of insulation of live parts (416.1)	Pass
6.4	Non-sheathed cables protected by enclosure in conduit, ducting or trunking (521.10.1)	N/A
6.5	Suitability of containment systems for continued use (including flexible conduit) (Section 522)	Pass
6.6	Cables correctly terminated in enclosures (Section 526)	Pass
6.7	Confirmation that ALL conductor connections, including connections to busbars, are correctly located in terminals and are tight and secure (526.1)	Pass
6.8	Examination of cables for signs of unacceptable thermal or mechanical damage/deterioration (421.1; 522.6)	Pass
6.9	Adequacy of cables for current-carrying capacity with regard for the type and nature of installation (Section 523)	Pass
6.10	Adequacy of protective devices: type and rated current for fault protection (411.3)	Pass
6.11	Presence and adequacy of circuit protective conductors (411.3.1.1; 543.1)	Pass
6.12	Coordination between conductors and overload protective devices (433.1; 533.2.1)	Pass
6.13	Cable installation methods/practices with regard to the type and nature of installation and external influences (Section 522)	Pass
6.14	Where exposed to direct sunlight, cable of a suitable type (522.11.1)	Pass
6.15	Cables concealed under floors, above ceilings, in walls/partitions less than 50mm from a surface, an partitions containing metal parts:	id in
.15.1	Installed in prescribed zones (see Section 4. Extent and limitations) (522.6.202) or	LIM
5.15.2	Incorporating earthed armour or sheath, or run within earthed wiring system, or otherwise protected against mechanical damage by nails, screws and the like (see Section 4. Extent and limitations) (522.6.204)	
	Thechanical dumage by mans, serens and the line (see Section in Extent and immediation) (SEE161261)	LIM
6.16	Provision of fire barriers, sealing arrangements and protection against thermal effects (Section 527)	Pass
6.17	Provision of fire barriers, sealing arrangements and protection against thermal effects (Section 527) Band II cables segregated/separated from Band I cables (528.1)	Pass Pass
6.17 6.18	Provision of fire barriers, sealing arrangements and protection against thermal effects (Section 527) Band II cables segregated/separated from Band I cables (528.1) Cables segregated/separated from non-electrical services (528.3)	Pass Pass Pass
5.17 5.18 5.19	Provision of fire barriers, sealing arrangements and protection against thermal effects (Section 527) Band II cables segregated/separated from Band I cables (528.1) Cables segregated/separated from non-electrical services (528.3) Condition of circuit accessories (651.2)	Pass Pass Pass Pass
6.17 6.18 6.19 6.20	Provision of fire barriers, sealing arrangements and protection against thermal effects (Section 527) Band II cables segregated/separated from Band I cables (528.1) Cables segregated/separated from non-electrical services (528.3) Condition of circuit accessories (651.2) Suitability of circuit accessories for external influences (512.2)	Pass Pass Pass Pass Pass
6.17 6.18 6.19 6.20 6.21	Provision of fire barriers, sealing arrangements and protection against thermal effects (Section 527) Band II cables segregated/separated from Band I cables (528.1) Cables segregated/separated from non-electrical services (528.3) Condition of circuit accessories (651.2) Suitability of circuit accessories for external influences (512.2) Single-pole switching or protective devices in line conductors only (132.14.1; 530.3.3) Adequacy of connections, including cpcs, within accessories and to fixed and stationary equipment –	Pass Pass Pass Pass
6.17 6.18 6.19 6.20 6.21 6.22	Provision of fire barriers, sealing arrangements and protection against thermal effects (Section 527) Band II cables segregated/separated from Band I cables (528.1) Cables segregated/separated from non-electrical services (528.3) Condition of circuit accessories (651.2) Suitability of circuit accessories for external influences (512.2) Single-pole switching or protective devices in line conductors only (132.14.1; 530.3.3)	Pass Pass Pass Pass Pass Pass Pass

Ref: 23650256 - Page: 5 of 12

Description Non-sheathed cables protected by enclosure in conduit, ducting or trunking (521.10.1) Suitability of containment systems for continued use (including flexible conduit) (Section 522) Adequacy of cables for current-carrying capacity with regard for the type and nature of installation (Section 523) Adequacy of protective devices: type and rated current for fault protection (411.3) Presence and adequacy of circuit protective conductors (411.3.1.1; 543.1) Co-ordination between conductors and overload protective devices (433.1; 533.2.1) Wiring system(s) appropriate for the type and nature of the installation and external influences (Section 522) Cables concealed under floors, above ceillings, in walls/partitions, adequately protected against dan (522.6.201; 522.6.202; 522.6.203; 522.6.204): Installed in prescribed zones (see Section 4. Extent and limitations) (522.6.202) Incorporating earthed armour or sheath, or run within earthed wiring system, or otherwise protected against mechanical damage by nails, screws and the like (see Section 4. Extent and limitations) (522.6.201; 522.6.201; 522.6.204) Provision of additional protection by 30mA RCD: For all socket-outlets of rating 32A or less, unless an exemption is permitted (411.3.3) * For cables concealed in walls at a depth of less than 50mm (522.6.202, 522.6.203) * For cables concealed in walls at a depth of less than 50mm (522.6.202, 522.6.203) * For cables concealed in walls/partitions containing metal parts regardless of depth (522.6.203) * For colder installations designed prior to BS 7671:2018 may not have been provided with RCDs for addition protection. Provision of fire barriers, sealing arrangements and protection against thermal effects (Section 527) Band II cables segregated/separated from Band I cables (528.1)	LIM LIM Pass Pass Pass N/A Pass al
Adequacy of cables for current-carrying capacity with regard for the type and nature of installation (Section 522) Adequacy of cables for current-carrying capacity with regard for the type and nature of installation (Section 523) Adequacy of protective devices: type and rated current for fault protection (411.3) Presence and adequacy of circuit protective conductors (411.3.1.1; 543.1) Co-ordination between conductors and overload protective devices (433.1; 533.2.1) Wiring system(s) appropriate for the type and nature of the installation and external influences (Section 522) Cables concealed under floors, above ceilings, in walls/partitions, adequately protected against dam (522.6.201; 522.6.202; 522.6.203; 522.6.204): Installed in prescribed zones (see Section 4. Extent and limitations) (522.6.202) Incorporating earthed armour or sheath, or run within earthed wiring system, or otherwise protected against mechanical damage by nails, screws and the like (see Section 4. Extent and limitations) (522.6.201; 522.6.204) Provision of additional protection by 30mA RCD: For all socket-outlets of rating 32A or less, unless an exemption is permitted (411.3.3) * For cables concealed in walls at a depth of less than 50mm (522.6.202, 522.6.203) * For cables concealed in walls at a depth of less than 50mm (522.6.202, 522.6.203) * For cables concealed in walls at a depth of less than 50mm (522.6.202, 522.6.203) * For cables concealed in walls/partitions containing metal parts regardless of depth (522.6.203) * For final circuits supplying luminaires within domestic (household) premises (411.3.4) * For Note: Older installations designed prior to BS 7671:2018 may not have been provided with RCDs for addition protection. Provision of fire barriers, sealing arrangements and protection against thermal effects (Section 527)	Pass Pass Pass Pass Pass Pass Pass Pass
Adequacy of cables for current-carrying capacity with regard for the type and nature of installation (Section 523) Adequacy of protective devices: type and rated current for fault protection (411.3) Presence and adequacy of circuit protective conductors (411.3.1.1; 543.1) Co-ordination between conductors and overload protective devices (433.1; 533.2.1) Wiring system(s) appropriate for the type and nature of the installation and external influences (Section 522) Cables concealed under floors, above ceilings, in walls/partitions, adequately protected against dan (522.6.201; 522.6.202; 522.6.203; 522.6.204): Installed in prescribed zones (see Section 4. Extent and limitations) (522.6.202) Incorporating earthed armour or sheath, or run within earthed wiring system, or otherwise protected against mechanical damage by nails, screws and the like (see Section 4. Extent and limitations) (522.6.201; 522.6.204) Provision of additional protection by 30mA RCD: For all socket-outlets of rating 32A or less, unless an exemption is permitted (411.3.3) * For the supply of mobile equipment not exceeding 32A rating for use outdoors (411.3.3) * For cables concealed in walls at a depth of less than 50mm (522.6.202, 522.6.203) * For cables concealed in walls/partitions containing metal parts regardless of depth (522.6.203) * For final circuits supplying luminaires within domestic (household) premises (411.3.4) * Note: Older installations designed prior to BS 7671:2018 may not have been provided with RCDs for addition protection. 	NSPECTION SCHEDULE (CONTINUED)											
/ Item	Description	Outcome										
8.3	Emergency switching/stopping (Section 465; 537.3.3):											
8.3.1	Presence and condition of appropriate devices (Section 465; 537.3.3; 537.4)	N/A										
8.3.2	Readily accessible for operation where danger might occur (537.3.3.6)	N/A										
8.3.3	Correct operation verified (643.10)	N/A										
8.3.4	Clearly identified by position and/or durable marking (537.3.3.6)	N/A										
8.4	Functional switching (Section 463; 537.3.1):											
8.4.1	Presence and condition of appropriate devices (537.3.1.1; 537.3.1.2)	Pass										
8.4.2	Correct operation verified (537.3.1.1; 537.3.1.2)	Pass										
9.0	CURRENT-USING EQUIPMENT (PERMANENTLY CONNECTED)											
9.1	Condition of equipment in terms of IP rating etc (416.2)	Pass										
9.2	Equipment does not constitute a fire hazard (Section 421)	Pass										
9.3	Enclosure not damaged/deteriorated so as to impair safety (134.1.1; 416.2; 512.2)	Pass										
9.4	Suitability for the environment and external influences (512.2)	Pass										
9.5	Security of fixing (134.1.1)	Pass										
9.6	Cable entry holes in ceiling above luminaires, sized or sealed so as to restrict the spread of fire: List number and location of luminaires inspected (separate page) (527.2)	Pass										
9.7	Recessed luminaires (downlighters):											
9.7.1	Correct type of lamps fitted (559.3.1)	Pass										
9.7.2	Installed to minimise build-up of heat by use of 'fire rated' fittings, insulation displacement box or similar (421.1.2)	Pass										
9.7.3	No signs of overheating to surrounding building fabric (559.4.1)	Pass										
9.7.4	No signs of overheating to conductors/terminations (526.1)	Pass										
10.0	LOCATION(S) CONTAINING A BATH OR SHOWER											
10.1	Additional protection for all low voltage (LV) circuits by RCD not exceeding 30mA (701.411.3.3)	Pass										
10.2	Where used as a protective measure, requirements for SELV or PELV met (701.414.4.5)	N/A										
10.3	Shaver supply units comply with BS EN 61558-2-5 formerly BS 3535 (701.512.3)	N/A										
10.4	Presence of supplementary bonding conductors, unless not required by BS 7671:2018 (701.415.2)	Pass										
10.5	Low voltage (e.g. 230 V) socket-outlets sited at least 2.5m from zone 1 (701.512.3)	N/A										
10.6	Suitability of equipment for external influences for installed location in terms of IP rating (701.512.2)	Pass										
10.7	Suitability of accessories and controlgear etc. for a particular zone (701.512.3)	Pass										
10.8	Suitability of current-using equipment for particular position within the location (701.55)	Pass										
11.0	OTHER PART 7 SPECIAL INSTALLATIONS OR LOCATIONS List all other special installation or locations present, if any. (Record separately the results of particular inspection)	ons)

ELECTRICAL INSTALLATION CONDITION REPORT GUIDANCE FOR RECIPIENTS

(to be appended to the Report)

This Report is an important and valuable document which should be retained for future reference.

- 1. The purpose of this Report is to confirm, so far as reasonably practicable, whether or not the electrical installation is in a satisfactory condition for continued service (see Section 5). The Report should identify any damage, deterioration, defects and/or conditions which may give rise to danger (see Section 7).
- 2. This Report is only valid if accompanied by the Inspection Schedule(s) and the Schedule(s) of Circuit Details and Test Results
- 3. The person ordering the Report should have received the 'original' Report and the inspector should have retained a duplicate.
- 4. The original Report should be retained in a safe place and be made available to any person inspecting or undertaking work on the electrical installation in the future. If the property is vacated, this Report will provide the new owner/occupier with details of the condition of the electrical installation at the time the Report was issued.
- 5. Section 4 (Extent and Limitations) should identify fully the extent of the installation covered by this Report and any limitations on the inspection and testing. The inspector should have agreed these aspects with the person ordering the Report and with other interested parties (licensing authority, insurance company, mortgage provider and the like) before the inspection was carried out.
- 6. Some operational limitations such as inability to gain access to parts of the installation or an item of equipment may have been encountered during the inspection. The inspector should have noted these in Section 4.
- 7. For items classified in Section 7 as CI (Danger present), the safety of those using the installation is at risk, and it is recommended that a skilled person or persons competent in electrical installation work undertakes the necessary remedial work immediately.
- 8. For items classified in Section 7 as C2 (Potentially dangerous), the safety of those using the installation at risk and it is recommended that a skilled person or persons competent in electrical installation work undertakes the necessary remedial work as a matter of urgency.
- 9. Where it has been stated in Section 7 that an observation requires further investigation (code FI) the inspection has revealed an apparent deficiency which may result in a code CI or C2, and could not, due to the extent or limitations of the inspection, be fully identified. Such observations should be investigated without delay. A further examination of the installation will be necessary, to determine the nature and extent of the apparent deficiency (see Section 7).
- 10. For safety reasons, the electrical installation should be re-inspected at appropriate intervals by a skilled person or persons, competent in such work. The recommended date by which the next inspection is due is stated in Section 7 of the Report under Recommendations.
- 11. Where the installation includes a residual current device (RCD) it should be tested six-monthly by pressing the button marked 'T' or 'Test'. The device should switch off the supply and should then be switched on to restore the supply. If the device does not switch off the supply when the button is pressed, seek expert advice. For safety reasons it is important that this instruction is followed.
- 12. Where the installation includes an arc fault detection device (AFDD) having a manual test facility it should. be tested six-monthly by pressing the test button. Where an AFDD has both a test button and automatic test function, manufacturer's instructions shall be followed with respect to test button operation.
- 13. Where the installation includes a surge protective device (SPD) the status indicator should be checked to confirm it is in operational condition in accordance with manufacturer's information. If the indication shows that the device is not operational, seek expert advice. For safety reasons it is important that this instruction is followed.
- 14. Where the installation includes alternative or additional sources of supply, warning notices should be found at the origin or meter position or, if remote from the origin, at the consumer unit or distribution board and at all points of isolation of all sources of supply.
