

ELECTRICAL INSTALLATION CONDITION REPORT FOR THE PRIVATE RENTED SECTOR Requirements For Electrical Installations - BS 7671

Certificate Number:

0000533

	LS OF THE PERSON ORDERING THE REPORT
Client:	Condor Properties
Address:	Mill House, Lugg Bridge Mill, Hereford, HR1 3NA
2 REAS	ON FOR PRODUCING THIS REPORT
	producing this report:
Landlords	fety report.
Date on whic	inspection and testing was carried out: 03/09/2024
3 DETA	LS OF THE INSTALLATION WHICH IS THE SUBJECT OF THIS REPORT
Installatio	Address: 196 A Ashby Road, Loughborough, Leicestershire, LE11 3AD
Estimated ag	of wiring system: 15 years Evidence of additions/ alterations: No if yes, estimated age: N/A years
Installation r	cords available? (Regulation 651.1) Yes Date of last inspection: 25/03/2021
	IT AND LIMITATIONS OF INSPECTION AND TESTING
	e electrical installation covered by this report: installation of which 25% of the accessories were removed to inspect the condition of the enclosed
Agreed limit	ions including the reasons (see Regulation 653.2):
-	floor boards or inspection of loft space.
Concealed	ables Contained within The Fabric Of The Installation.
Agreed with	Condor Properties
Operational	nitations including the reasons:
None	
7671:2018 (It should be of the building	and testing detailed in this report and accompanying schedules have been carried out in accordance with BS ET Wiring Regulations) as amended to 2022. oted that cables concealed within trunking and conduits, under floors, in roof spaces, and generally within the fabric or underground, have not been inspected unless specifically agreed between the client and inspector prior to the inspection should be made within an accessible roof space housing other electrical equipment.
	ARY OF THE CONDITION OF THE INSTALLATION
ſ	8 for a summary of the general condition of the installation in terms of electrical safety.
continued u	e*: SATISFACTORY
	factory assessment indicates that dangerous (Code C1) and/or potentially dangerous (Code C2) ave been identified.
Where the I/We recommended as a matter	
Observations	without delay is recommended for observations identified as 'FI - Further Investigation Required'. classified as 'Code 3 - Improvement recommended' should be given due consideration.
	necessary remedial action being taken, I/we recommend that 5 Years 5 Years
	posed date for the next inspection should take into consideration the frequency and quality of maintenance that the n reasonably be expected to receive during its intended life. The period should be agreed between relevant parties.
This form is h	sed on the model shown in Appendix 6 of BS 7671·2018+A2·2022 Page: 1 of 7

Referri		safety	cified on page 1
V Tł	ne following observations and recommendation	or ns are made	
Item No		Observations	Classification Code
1	No AFDD devices installed throughout th	e installation	C3
2	No SPD Device present		C3
3	Inspection Schedule Item 4.4: Condition of 526.5) is recommended for improvement	of enclosure(s) in terms of fire rating etc (421.1.201; . (Non Metal Construction)	C3
responsib	e following codes, as appropriate, has been all le for the installation the degree of urgency for ger Present of injury. Immediate edial action required	ngerous C3 Improvement FT Further in	to the person(s) westigation without delay
Immedia	ate remedial action required for items:	N/A	
Urgent r	emedial action required for items:	N/A	
Improve	ment recommended for items:	1, 2, 3	
Further i	investigation required for items:	N/A

Item	Description	Outcome									
1.0	INTAKE EQUIPMENT (VISUAL INSPECTION ONLY)										
1.1	An outcome against an item in this section, other than access to live parts, should not be used to determine the overall outcome Distributor/supplier intake equipment										
1.1.1	Service cable	Pass									
1.1.2	Service head	Pass									
1.1.3	Earthing arrangement	Pass									
1.1.4	Meter tails	Pass									
1.1.5	Metering equipment	Pass									
1.1.6	Isolator (where present) Where inadequacies in the intake equipment are encountered, which may result in a dangerous or potentially d situation, the person ordering the work and/or the dutyholder must be informed. It is strongly recommended t person ordering the work informs the appropriate authority. For this section only, where inadequacies are found should be put against the appropriate item and a comment made in Section 7.	hat the									
	Has the person ordering the work / dutyholder been notified?	N/A									
1.2	Consumer's isolator (where present)	Pass									
1.3	Consumer's meter tails	Pass									
2.0	PRESENCE OF ADEQUATE ARRANGEMENTS FOR OTHER SOURCES SUCH AS MICROGENERATORS (551.6; 551.7)	Pass									
3.0	EARTHING / BONDING ARRANGEMENTS (411.3; Chap 54)	_									
3.1	Presence and condition of distributor's earthing arrangement (542.1.2.1; 542.1.2.2)	Pass									
3.2	Presence and condition of earth electrode connection where applicable (542.1.2.3)	N/A									
3.3	Provision of earthing/bonding labels at all appropriate locations (514.13.1)	Pass									
3.4	Confirmation of earthing conductor size (542.3; 543.1.1)	Pass									
3.5	Accessibility and condition of earthing conductor at MET (543.3.2)	Pass									
3.6	Confirmation of main protective bonding conductor sizes (544.1)	Pass									
3.7	Condition and accessibility of main protective bonding conductor connections (543.3.2; 544.1.2)	Pass									
3.8	Accessibility and condition of other protective bonding connections (543.3.1; 543.3.2)	Pass									
4.0	CONSUMER UNIT(S) / DISTRIBUTION BOARD(S)										
4.1	Adequacy of working space/accessibility to consumer unit/distribution board (132.12; 513.1)	Pass									
4.2	Security of fixing (134.1.1)	Pass									
4.3	Condition of enclosure(s) in terms of IP rating etc (416.2)	Pass									
4.4	Condition of enclosure(s) in terms of fire rating etc (421.1.201; 526.5)	C3									
4.5	Enclosure not damaged/deteriorated so as to impair safety (651.2)	Pass									
4.6	Presence of main linked switch (as required by 462.1.201)	Pass									
4.7	Operation of main switch (functional check) (643.10)	Pass									
4.8	Manual operation of circuit-breakers and RCDs to prove disconnection (643.10)	Pass									
4.9	Correct identification of circuit details and protective devices (514.8.1; 514.9.1)	Pass									
4.10	Presence of RCD six-monthly test notice, where required (514.12.2)	Pass									
4.11	Presence of alternative supply warning notice at or near consumer unit/distribution board (514.15)	N/A									
4.12	Presence of other required labelling (please specify) (Section 514)	Pass									
4.13	Compatibility of protective devices, bases and other components; correct type and rating (No signs of unacceptable thermal damage, arcing or overheating) (411.3.2; 411.4; 411.5; 411.6; Sections 432, 433)	Pass									
4.14	Single-pole switching or protective devices in line conductor only (132.14.1; 530.3.3)	Pass									
4.15	Protection against mechanical damage where cables enter consumer unit/distribution board (132.14.1; 522.8.1; 522.8.5; 522.8.11) Protection against electromagnetic effects where cables enter consumer unit/distribution board/enclosures	Pass									
4.16	(521.5.1)	Pass									
4.17	RCD(s) provided for fault protection - includes RCBOs (411.4.204; 411.5.2; 531.2)	N/A Pass									
4.19											
4.20	terminals and are tight and secure (526.1)										
4.21	Adequate arrangements where a generating set operates as a switched alternative to the public supply (551.6)	N/A									
4.22	Adequate arrangements where a generating set operates in parallel with the public supply (551.7)	N/A

ELECTRICAL INSTALLATION CONDITION REPORT GUIDANCE FOR RECIPIENTS

(to be appended to the Report)

This Report is an important and valuable document which should be retained for future reference.

1. The purpose of this Report is to confirm, so far as reasonably practicable, whether or not the electrical installation is in a satisfactory condition for continued service (see Section 5). The Report should identify any damage, deterioration, defects and/or conditions which may give rise to danger (see Section 7).

2. This Report is only valid if accompanied by the Inspection Schedule(s) and the Schedule(s) of Circuit Details and Test Results

3. The person ordering the Report should have received the 'original' Report and the inspector should have retained a duplicate.

4. The original Report should be retained in a safe place and be made available to any person inspecting or undertaking work on the electrical installation in the future. If the property is vacated, this Report will provide the new owner/occupier with details of the condition of the electrical installation at the time the Report was issued.

5. Section 4 (Extent and Limitations) should identify fully the extent of the installation covered by this Report and any limitations on the inspection and testing. The inspector should have agreed these aspects with the person ordering the Report and with other interested parties (licensing authority, insurance company, mortgage provider and the like) before the inspection was carried out.

6. Some operational limitations such as inability to gain access to parts of the installation or an item of equipment may have been encountered during the inspection. The inspector should have noted these in Section 4.

7. For items classified in Section 7 as CI (Danger present), the safety of those using the installation is at risk, and it is recommended that a skilled person or persons competent in electrical installation work undertakes the necessary remedial work immediately.

8. For items classified in Section 7 as C2 (Potentially dangerous), the safety of those using the installation at risk and it is recommended that a skilled person or persons competent in electrical installation work undertakes the necessary remedial work as a matter of urgency.

9. Where it has been stated in Section 7 that an observation requires further investigation (code FI) the inspection has revealed an apparent deficiency which may result in a code CI or C2, and could not, due to the extent or limitations of the inspection, be fully identified. Such observations should be investigated without delay. A further examination of the installation will be necessary, to determine the nature and extent of the apparent deficiency (see Section 7).

10. For safety reasons, the electrical installation should be re-inspected at appropriate intervals by a skilled person or persons, competent in such work. The recommended date by which the next inspection is due is stated in Section 7 of the Report under Recommendations.

11. Where the installation includes a residual current device (RCD) it should be tested six-monthly by pressing the button marked 'T' or 'Test'. The device should switch off the supply and should then be switched on to restore the supply. If the device does not switch off the supply when the button is pressed, seek expert advice. For safety reasons it is important that this instruction is followed.

12. Where the installation includes an arc fault detection device (AFDD) having a manual test facility it should. be tested six-monthly by pressing the test button. Where an AFDD has both a test button and automatic test function, manufacturer's instructions shall be followed with respect to test button operation.

13. Where the installation includes a surge protective device (SPD) the status indicator should be checked to confirm it is in operational condition in accordance with manufacturer's information. If the indication shows that the device is not operational, seek expert advice. For safety reasons it is important that this instruction is followed.

14. Where the installation includes alternative or additional sources of supply, warning notices should be found at the origin or meter position or, if remote from the origin, at the consumer unit or distribution board and at all points of isolation of all sources of supply.
