

ELECTRICAL INSTALLATION CONDITION

REPORT Requirements For Electrical Installations - BS 7671

	Certificate N	Certificate Number: 2365						
1 DETAILS OF THE PERSON ORDERING T	HE REPORT							
Client: Condor Properties								
Address: Mill House, Lugg Bridge Mill, Hereford, HF	R13NA							
2 REASON FOR PRODUCING THIS REPOR	т							
Reason for producing this report:								
Landlords safety report.								
Date on which inspection and testing was carried out:	07/06/2024							
3 DETAILS OF THE INSTALLATION WHIC	H IS THE SUBJECT	OF THIS	REPORT					
Installation Address: 96 Derby Road , Loughborough	, Leicestershire, LE11 5	AG						
Description of premises: Domestic N/A Commercia	N/A Industrial	N/A Other:	HMO Studen	t Accommo	odation			
Estimated age of wiring system: 20 years	Evidence of additions/ alterations:	No if y	es, estimated a	ge: N/A	years			
Installation records available? (Regulation 651.1) Yes	s I	Date of last i	nspection:	05/05/2	021			
4 EXTENT AND LIMITATIONS OF INSPEC	TION AND TESTIN	G						
Extent of the electrical installation covered by this report:								
50% of the installation in accordance with item 3.8.4	of Guidance Note 3.							
Agreed limitations including the reasons (see Regulation 65	3.2):							
No Lifting of floor boards or inspection of loft space.								
Agreed with: Mr B Pope								
Operational limitations including the reasons:								
None								
The inspection and testing detailed in this report and accom	panying schedules have	been carried	l out in accordai	nce with BS				
7671:2018 (IET Wiring Regulations) as amended to 2022. It should be noted that cables concealed within trunking and	d conduits, under floors	in roof chac	as and gonorall	within the	fabric			
of the building or underground, have not been inspected un	less specifically agreed b	etween the	client and inspe					
inspection. An inspection should be made within an accessit	ble roof space housing ot	her electrica	l equipment.					
5 SUMMARY OF THE CONDITION OF THE See section 8 for a summary of the general condition of t		f oloctrical c	afoty					
Overall assessment of the installation in terms of it's			SATISFACTO	DRY				
continued use*: * An unsatisfactory assessment indicates that danger	rous (Code C1) and/or	notentially			- 11			
conditions have been identified.		potentially						
6 RECOMMENDATIONS								
Where the overall assessment of the suitability of the inst I/We recommend that any observations classified as 'Code a								
as a matter of urgency.	-				. apon			
Investigation without delay is recommended for observatior Observations classified as 'Code 3 - Improvement recomme	nded' should be given du							
Subject to the necessary remedial action being taken, I/we the installation is further inspected and tested by:	recommend that		3 Years					
Note: The proposed date for the next inspection should take								
installation can reasonably be expected to receive during its	menueu me. me perio	u should be a	agreed between	relevant pa	arties.			

OBSERVATIONS AND RECOMMENDATIONS FOR ACTIONS TO BE TAKEN Referring to the attached schedules of inspection and test results, and subject to the limitations specified on page 3 of this report under 'Extent of the Installation and Limitations of Inspection and Testing':												
	eport under 'Extent of the Installation and here are no items adversely affecting electrical											
	he following observations and recommendation	or										
✓ T												
Item No		Observations	Classification Code									
1	No SPD Device present		C3									
2	No AFDD devices installed throughout th	e installation	C3									
3	Consumer Unit non metallic:Inspection So of fire rating etc (421.1.6; 421.1.201; 526	chedule Item 5.6: Condition of enclosure(s) in terms .5) is recommended for improvement.	C3									
4	Water heaters circuits 6 & 7 no 30ma RCE	D protection afforeded to concealed cables	C3									
	e following codes, as appropriate, has been all ble for the installation the degree of urgency fo	ocated to each of the observations made above to indicate t r remedial action.	to the person(s)									
Risk	of injury. Immediate edial action required	angerous C3 Improvement FI Further in recommended required w	vestigation vithout delay									
Immedi	ate remedial action required for items:	N/A										
Urgent i	remedial action required for items:	N/A										
Improve	ement recommended for items:	1, 2, 3, 4										
Further	investigation required for items:	N/A										

GENERAL CONDITION OF THE INSTALLATION General condition of the installation (in terms of electrical safety):

12 II	NSPECTION SCHEDULE											
Item	n Description 0											
1.0	EXTERNAL CONDITION OF INTAKE EQUIPMENT (VISUAL INSPECTION ONLY) Where inadequacies in intake equipment are encountered, it is recommended that the person ordering the report the appropriate authority	ort informs										
1.1	Service cable	Pass										
1.2	Service head	Pass										
1.3	Earthing arrangements	Pass										
1.4	Meter tails	Pass										
1.5	Metering equipment	Pass										
1.6	Isolator (where present)	N/A										
2.0	PRESENCE OF ADEQUATE ARRANGEMENTS FOR PARALLEL OR SWITCHED ALTERNATIVE SOURCES	1.177										
2.1	Adequate arrangements where a generating set operates as a switched alternative to the public supply (551.6)	N/A										
2.2	Adequate arrangements where a generating set operates in parallel with the public supply (551.7)	N/A										
3.0	AUTOMATIC DISCONNECTION OF SUPPLY	,										
3.1	Main earthing/bonding arrangements (411.3; Chap 54):											
3.1.1	Presence of distributor's earthing arrangement (542.1.2.1; 542.1.2.2), or presence of installation earth electrode arrangement (542.1.2.3)	Pass										
3.1.2	Adequacy of earthing conductor size (542.3; 543.1.1)	Pass										
3.1.3	Adequacy of earthing conductor connections (542.3.2)	Pass										
3.1.4	Accessibility of earthing conductor connections (543.3.2)	Pass										
3.1.5	Adequacy of main protective bonding conductor sizes (544.1)	Pass										
3.1.6	Adequacy and location of main protective bonding conductor connections (543.3.2; 544.1.2)	Pass										
3.1.7	Accessibility of all protective bonding connections (543.3.2)	Pass										
3.1.8	Provision of earthing/bonding labels at all appropriate locations (514.13)	Pass										
3.2	FELV - requirements satisfied (411.7; 411.7.1)	N/A										
4.0	OTHER METHODS OF PROTECTION (where any of the methods listed below are employed details sho provided on separate sheets)	•										
4.1	Non-conducting location (418.1)	N/A										
4.2	Earth-free local equipotential bonding (418.2)	N/A										
4.3	Electrical separation (Section 413; 418.3)	N/A										
4.4	Double insulation (Section 412)	N/A										
4.5	Reinforced insulation (Section 412)	N/A										
5.0	DISTRIBUTION EQUIPMENT	-										
5.1	Adequacy of working space/accessibility to equipment (132.12; 513.1)	Pass										
5.2	Security of fixing (134.1.1)	Pass										
5.3	Condition of insulation of live parts (416.1)	Pass										
5.4	Adequacy/security of barriers (416.2)	Pass										
5.5	Condition of enclosure(s) in terms of IP rating etc (416.2)	Pass										
5.6	Condition of enclosure(s) in terms of fire rating etc (421.1.6; 421.1.201; 526.5)	C3										
5.7	Enclosure not damaged/deteriorated so as to impair safety (651.2)	Pass										
5.8	Presence and effectiveness of obstacles (417.2)	Pass										
5.9	Presence of main switch(es), linked where required (462.1; 462.1.201; 462.2)	Pass										
5.10	Operation of main switch(es) (functional check) (643.10)	Pass										
5.11	Manual operation of circuit-breakers, RCDs and AFDDs to prove functionality (643.10)	Pass										
5.12	Confirmation that integral test button/switch causes RCD(s) to trip when operated (functional check) (643.10)	Pass										
5.13	RCD(s) provided for fault protection – includes RCBOs (411.4.204; 411.5.2; 531.2)	N/A										
5.14	RCD(s) provided for additional protection/requirements, where required – includes RCBOs (411.3.3;											
	415.1)	Pass

12 II	NSPECTION SCHEDULE (CONTINUED)	
Item	Description	Outcome
5.15	Presence of RCD six-monthly test notice, where required (514.12.2)	Pass
5.16	Presence of diagrams, charts or schedules at or near equipment, where required (514.9.1)	Pass
5.17	Presence of alternative supply warning notice at or near equipment, where required (514.15)	Pass
5.18	Presence of next inspection recommendation label (514.12.1)	Pass
5.19	Presence of other required labelling (please specify) (Section 514)	N/A
5.20	Compatibility of protective devices, bases and other components; correct type and rating (no signs of unacceptable thermal damage, arcing or overheating) (411.3.2; 411.4; 411.5; 411.6; Sections 432, 433)	Pass
5.21	Single-pole switching or protective devices in line conductors only (132.14.1; 530.3.3)	Pass
5.22	Protection against mechanical damage where cables enter equipment (522.8.1; 522.8.5; 522.8.11)	Pass
5.23	Protection against electromagnetic effects where cables enter ferromagnetic enclosures (521.5.1)	Pass
6.0	DISTRIBUTION CIRCUITS	
6.1	Identification of conductors (514.3.1)	Pass
6.2	Cables correctly supported throughout their run (521.10.202; 522.8.5)	LIM
6.3	Condition of insulation of live parts (416.1)	Pass
6.4	Non-sheathed cables protected by enclosure in conduit, ducting or trunking (521.10.1)	N/A
6.5	Suitability of containment systems for continued use (including flexible conduit) (Section 522)	Pass
6.6	Cables correctly terminated in enclosures (Section 526)	Pass
6.7	Confirmation that ALL conductor connections, including connections to busbars, are correctly located in terminals and are tight and secure (526.1)	Pass
6.8	Examination of cables for signs of unacceptable thermal or mechanical damage/deterioration (421.1; 522.6)	Pass
6.9	Adequacy of cables for current-carrying capacity with regard for the type and nature of installation (Section 523)	Pass
6.10	Adequacy of protective devices: type and rated current for fault protection (411.3)	Pass
6.11	Presence and adequacy of circuit protective conductors (411.3.1.1; 543.1)	Pass
6.12	Coordination between conductors and overload protective devices (433.1; 533.2.1)	Pass
6.13	Cable installation methods/practices with regard to the type and nature of installation and external influences (Section 522)	Pass
6.14	Where exposed to direct sunlight, cable of a suitable type (522.11.1)	Pass
6.15	Cables concealed under floors, above ceilings, in walls/partitions less than 50mm from a surface, ar partitions containing metal parts:	nd in
6.15.1	Installed in prescribed zones (see Section 4. Extent and limitations) (522.6.202) or	LIM
6.15.2	Incorporating earthed armour or sheath, or run within earthed wiring system, or otherwise protected against mechanical damage by nails, screws and the like (see Section 4. Extent and limitations) (522.6.204)	N/A
6.16	Provision of fire barriers, sealing arrangements and protection against thermal effects (Section 527)	Pass
6.17	Band II cables segregated/separated from Band I cables (528.1)	Pass
6.18	Cables segregated/separated from non-electrical services (528.3)	Pass
6.19	Condition of circuit accessories (651.2)	Pass
6.20	Suitability of circuit accessories for external influences (512.2)	Pass
6.21	Single-pole switching or protective devices in line conductors only (132.14.1; 530.3.3)	Pass
6.22	Adequacy of connections, including cpcs, within accessories and to fixed and stationary equipment – identify/record numbers and locations of items inspected (Section 526)	Pass
6.23	Presence, operation and correct location of appropriate devices for isolation and switching (Chapter 46; Section 537)	Pass
6.24	General condition of wiring systems (651.2)	Pass
6.25	Temperature rating of cable insulation (522.1.1; Table 52.1)	Pass
7.0	FINAL CIRCUITS	
7.1	Identification of conductors (514.3.1)	Pass
7.2	Cables correctly supported throughout their run (521.10.202; 522.8.5)	LIM
7.3	Condition of insulation of live parts (416.1)	Pass

12 II	NSPECTION SCHEDULE (CONTINUED)	
Item	Description	Outcome
8.3	Emergency switching/stopping (Section 465; 537.3.3):	
8.3.1	Presence and condition of appropriate devices (Section 465; 537.3.3; 537.4)	N/A
8.3.2	Readily accessible for operation where danger might occur (537.3.3.6)	N/A
8.3.3	Correct operation verified (643.10)	N/A
8.3.4	Clearly identified by position and/or durable marking (537.3.3.6)	N/A
8.4	Functional switching (Section 463; 537.3.1):	
8.4.1	Presence and condition of appropriate devices (537.3.1.1; 537.3.1.2)	Pass
8.4.2	Correct operation verified (537.3.1.1; 537.3.1.2)	Pass
9.0	CURRENT-USING EQUIPMENT (PERMANENTLY CONNECTED)	
9.1	Condition of equipment in terms of IP rating etc (416.2)	Pass
9.2	Equipment does not constitute a fire hazard (Section 421)	Pass
9.3	Enclosure not damaged/deteriorated so as to impair safety (134.1.1; 416.2; 512.2)	Pass
9.4	Suitability for the environment and external influences (512.2)	Pass
9.5	Security of fixing (134.1.1)	Pass
9.6	Cable entry holes in ceiling above luminaires, sized or sealed so as to restrict the spread of fire: List number and location of luminaires inspected (separate page) (527.2)	Pass
9.7	Recessed luminaires (downlighters):	
9.7.1	Correct type of lamps fitted (559.3.1)	N/A
9.7.2	Installed to minimise build-up of heat by use of 'fire rated' fittings, insulation displacement box or similar (421.1.2)	N/A
9.7.3	No signs of overheating to surrounding building fabric (559.4.1)	N/A
9.7.4	No signs of overheating to conductors/terminations (526.1)	N/A
10.0	LOCATION(S) CONTAINING A BATH OR SHOWER	
10.1	Additional protection for all low voltage (LV) circuits by RCD not exceeding 30mA (701.411.3.3)	Pass
10.2	Where used as a protective measure, requirements for SELV or PELV met (701.414.4.5)	Pass
10.3	Shaver supply units comply with BS EN 61558-2-5 formerly BS 3535 (701.512.3)	N/A
10.4	Presence of supplementary bonding conductors, unless not required by BS 7671:2018 (701.415.2)	Pass
10.5	Low voltage (e.g. 230 V) socket-outlets sited at least 2.5m from zone 1 (701.512.3)	Pass
10.6	Suitability of equipment for external influences for installed location in terms of IP rating (701.512.2)	Pass
10.7	Suitability of accessories and controlgear etc. for a particular zone (701.512.3)	Pass
10.8	Suitability of current-using equipment for particular position within the location (701.55)	Pass
11.0	OTHER PART 7 SPECIAL INSTALLATIONS OR LOCATIONS List all other special installation or locations present, if any. (Record separately the results of particular inspecti	onc)

ELECTRICAL INSTALLATION CONDITION REPORT GUIDANCE FOR RECIPIENTS

(to be appended to the Report)

This Report is an important and valuable document which should be retained for future reference.

1. The purpose of this Report is to confirm, so far as reasonably practicable, whether or not the electrical installation is in a satisfactory condition for continued service (see Section 5). The Report should identify any damage, deterioration, defects and/or conditions which may give rise to danger (see Section 7).

2. This Report is only valid if accompanied by the Inspection Schedule(s) and the Schedule(s) of Circuit Details and Test Results

3. The person ordering the Report should have received the 'original' Report and the inspector should have retained a duplicate.

4. The original Report should be retained in a safe place and be made available to any person inspecting or undertaking work on the electrical installation in the future. If the property is vacated, this Report will provide the new owner/occupier with details of the condition of the electrical installation at the time the Report was issued.

5. Section 4 (Extent and Limitations) should identify fully the extent of the installation covered by this Report and any limitations on the inspection and testing. The inspector should have agreed these aspects with the person ordering the Report and with other interested parties (licensing authority, insurance company, mortgage provider and the like) before the inspection was carried out.

6. Some operational limitations such as inability to gain access to parts of the installation or an item of equipment may have been encountered during the inspection. The inspector should have noted these in Section 4.

7. For items classified in Section 7 as CI (Danger present), the safety of those using the installation is at risk, and it is recommended that a skilled person or persons competent in electrical installation work undertakes the necessary remedial work immediately.

8. For items classified in Section 7 as C2 (Potentially dangerous), the safety of those using the installation at risk and it is recommended that a skilled person or persons competent in electrical installation work undertakes the necessary remedial work as a matter of urgency.

9. Where it has been stated in Section 7 that an observation requires further investigation (code FI) the inspection has revealed an apparent deficiency which may result in a code CI or C2, and could not, due to the extent or limitations of the inspection, be fully identified. Such observations should be investigated without delay. A further examination of the installation will be necessary, to determine the nature and extent of the apparent deficiency (see Section 7).

10. For safety reasons, the electrical installation should be re-inspected at appropriate intervals by a skilled person or persons, competent in such work. The recommended date by which the next inspection is due is stated in Section 7 of the Report under Recommendations.

11. Where the installation includes a residual current device (RCD) it should be tested six-monthly by pressing the button marked 'T' or 'Test'. The device should switch off the supply and should then be switched on to restore the supply. If the device does not switch off the supply when the button is pressed, seek expert advice. For safety reasons it is important that this instruction is followed.

12. Where the installation includes an arc fault detection device (AFDD) having a manual test facility it should. be tested six-monthly by pressing the test button. Where an AFDD has both a test button and automatic test function, manufacturer's instructions shall be followed with respect to test button operation.

13. Where the installation includes a surge protective device (SPD) the status indicator should be checked to confirm it is in operational condition in accordance with manufacturer's information. If the indication shows that the device is not operational, seek expert advice. For safety reasons it is important that this instruction is followed.

14. Where the installation includes alternative or additional sources of supply, warning notices should be found at the origin or meter position or, if remote from the origin, at the consumer unit or distribution board and at all points of isolation of all sources of supply.
